Equal Path™ Filters

The desired color is achieved through the “flood” angle, transmitting an “equal” amount of visible light over a small or large filter.

The **Equal Path™ Filter** solves the noticeable color shift at the edge of the dichroic filter known as “halation”.

We offer **three** different filters for your floodlight applications: Cylindrical, Spherical and Parabolic. Each filter is custom made to match your floodlight’s flood angle. Each floodlight has a unique set of characteristics based on the type of reflector and the placement of the bulb. Infinite Optics requires a customer supplied light fixture to develop these unique coatings. The filters can be developed for most colors.

CYLINDRICAL Equal Path™ Filter

SPHERICAL Equal Path™ Filter

PARABOLIC Equal Path™ Filter

Offering custom coating designs for special applications or custom requirements, and much more. Contact us to receive more information regarding these products.
